

ServiceWindow — End-to-End QA Checklist

v2.0 — 2026-05-31

Final platform sweep before launch. Two accounts required: one verified truck operator, one event planner. Use separate browsers or private windows. Note bugs with page + action in section 12.

1. TEST SETUP — ACCOUNTS & ENVIRONMENT

- Truck account: existing verified truck operator, logged in
- Planner account: existing or new event planner, logged in
- Admin account: admin-dashboard.html access confirmed
- Both accounts open simultaneously in separate browsers/private windows

2. PUBLIC-FACING PAGES

- index.html — hero, sections, CTAs visible, no JS errors in console
- marketplace.html — truck cards display, filters work
- marketplace.html Shift board — urgent listings appear at top of results
- marketplace.html Shift board — urgent cards have fire-orange left border accent
- marketplace.html Shift board — "Post Emergency Coverage" CTA visible for unauthenticated users
- find-trucks.html — loads, search/filter functional
- truck-profile.html (?id=UUID) — loads for a real truck, all fields show
- Marketplace: click a truck card → public profile opens correctly
- vendor-services.html — provider listings render
- venues.html — loads correctly
- jobs.html — loads correctly
- pricing.html — correct pricing shown (\$39.99/mo trucks, free others)
- auth.html — sign in/sign up tabs both load, no console errors

3. AUTHENTICATION FLOW

- New truck signup → verification form appears → submit → pending state shown
- New planner signup → redirected to planner-dashboard.html correctly
- Truck login → redirects to truck-dashboard.html (not planner or admin)
- Planner login → redirects to planner-dashboard.html
- Admin login → redirects to admin-dashboard.html
- Unauthenticated visit to any dashboard → redirects to auth.html
- Logout from truck dashboard → session cleared, returns to auth.html
- Logout from planner dashboard → session cleared, returns to auth.html

4. ADMIN DASHBOARD

- Admin dashboard loads, all sections visible
- Pending truck verifications show in queue
- Approve a truck → status updates, truck receives access
- Reject a truck → status updates correctly
- Document tracking section — can view truck documents
- School Board Approved toggle — works on a truck profile
- User list renders with correct roles and statuses

5. TRUCK DASHBOARD (Supply Side)

Profile & Setup

- Dashboard loads — all nav items visible including "Emergency Coverage"
- Profile tab: all fields editable (cuisine, radius, pricing, description, photos, certs)
- Save profile → changes persist, visible on public truck-profile.html
- Photo upload → image appears in profile
- Service radius and pricing save correctly

Availability / Calendar

- Calendar loads on Overview or Bookings tab — no layout overflow on desktop
- Calendar loads correctly on mobile — no horizontal scroll blowout
- Mark a date unavailable → reflects correctly

Emergency Coverage (formerly "My Listings")

- Sidebar nav shows "Emergency Coverage" with ■ icon (not "My Listings")
- Emergency Coverage section loads — header and subtitle describe double-booking/can't-make-it use case
- Empty state shows "No active emergency coverage requests" with correct body copy
- Empty state has NO duplicate "Post Availability" button — only toolbar Post button
- "■ Post Coverage" toolbar button navigates to the post form
- Post form: fill all fields, submit → toast appears, row added to Active Coverage Posts table
- After posting: standby trucks receive email notification (verify via Supabase Edge Function logs or a real standby truck email account)
- Posted coverage visible on marketplace.html Shift board with Urgent badge and orange left border
- Posted coverage sorts above non-urgent listings on Shift board

Job Postings

- Jobs tab — can post a new job listing
- Job listing appears on public jobs.html
- Can edit and delete a job posting

6. BOOKING REQUEST FLOW (Core — test end to end)

Step 1: Planner creates a request

- Planner dashboard → Post Request / New Booking → form opens
- All form fields work: event name, date, time, location, cuisine, guest count, notes
- Submit → request saved, appears in planner Requests tab
- Request visible in truck dashboard Requests/Inbox tab

Step 2: Truck reviews and responds

- Truck opens inbox request — all details display correctly
- Booking times display correctly (start/end)
- Truck accepts request → booking created
- Truck declines a request → removed from inbox, planner notified
- Accepted booking appears in Bookings tab on truck side
- Accepted booking appears in Bookings tab on planner side

Step 3: Booking conflict handling

- Create a second request on same date truck already has a booking
- Conflict modal appears when truck tries to accept conflicting request
- Decline conflicting request from modal → booking removed, modal closes if none left
- Message requester from conflict modal → modal closes, Messages tab opens with thread

Step 4: Marking complete

- Truck marks booking as complete → booking status updates on both sides
- Completion modal or rating prompt appears on truck side
- Planner side: confirm what planner sees after truck marks complete

7. MESSAGING

- Truck opens Messages tab — existing threads load
- Planner opens Messages tab — existing threads load
- Truck sends message to planner → planner receives it in their thread
- Planner replies → truck receives reply in same thread
- Messages display in correct order (oldest → newest)
- No raw HTML or unsanitized content renders in messages (XSS check)
- Long messages wrap correctly — no overflow
- Mobile: messages tab usable on phone screen, no layout blowout

8. REVIEWS & RATINGS

- Truck can rate/review planner after booking marked complete
- Review saves and is associated with the booking
- Public truck-profile.html — aggregate rating and booking count display correctly

9. PLANNER DASHBOARD (Demand Side)

- Dashboard loads — tabs visible: Requests, Bookings, Messages, Profile
- Post a new event listing — form fields all functional
- Browse trucks on marketplace from planner context
- View booking history — past/active bookings listed
- Profile/account settings save correctly
- Notification of truck acceptance visible or emailed

10. STRIPE & SUBSCRIPTION

- New truck trial status shows correctly in dashboard (days remaining visible)
- Trial truck cannot bypass paywall after trial expires
- Upgrade flow: Stripe checkout page opens from dashboard CTA
- After successful Stripe payment → subscription_status updates in dashboard
- Stripe customer portal link works from dashboard

11. MOBILE SPOT CHECK (375px — phone or DevTools emulation)

- index.html — hero, nav, CTAs render correctly
- marketplace.html — truck cards stack correctly, no horizontal scroll
- truck-dashboard.html — all tabs accessible, no overflow; Emergency Coverage section usable
- planner-dashboard.html — all tabs accessible, no overflow
- auth.html — sign in form usable on phone
- Messages tab — readable and scrollable on mobile

12. BUGS FOUND THIS SWEEP
